Preface for Instructor	iii
Preface for Student	v
How to Read This Book	vii
I Background	1
1 Dynamics, ACME and Trebuchets	5
1.1 What is Dynamics?	7
1.2 Definitions and Vectors	11
1.3 Derivatives of Functions	23
1.4 Freebody Diagrams	27
II Translating Systems	37
2 Motion - Kinematics	41
2.1 General Procedure for Dynamics	43
2.2 Position	55
2.3 Velocity	73
2.4 Acceleration	91
2.5 Integrating for Position	101
3 Dynamics - Kinetics	119
3.1 A First Look at Dynamic Analysis	121
3.2 A Second Look at Dynamic Analysis	131
4 Constraints	145
4.1 Constraints	147
4.2 Well Defined Problems	169
4.3 Considering Friction	177
4.4 Making Assumptions	205
5 Handling Unknown Forces–Momentum	237
5.1 Judicious Choice of Systems	239
5.2 Impulse and Momentum	251
5.3 Impulsive Forces– Impacts	265
5.4 Momentum in Streams	287
6 Simulation and Design	301
6.1 Simulation of Simple Systems	303
6.2 Design Problems	315

7	Part II Summary	331
III	General Motion	333
8	Relative Motion - Kinematics	337
8.1	Relative Position	339
8.2	Vector Loops–Constraints	357
8.3	Motion From Relative Position	365
8.4	Differentiating Vectors Easily	381
8.5	General Kinematic Equations	409
8.6	Using All The Kinematic Tools	439
8.7	Standard Coordinate Systems	459
8.8	Visualizing Kinematics	469
9	Dynamics of Bodies–Kinetics	481
9.1	Dynamics of Rigid Bodies	483
9.2	Angular Momentum	493
9.3	Rigid Body Angular Momentum	503
9.4	General Motion of Rigid Bodies	527
10	Multibody and Contact Constraints	551
10.1	Constraints in Rigid Body Contact	553
10.2	The Axis of Rotation	585
10.3	Multiple Rigid Body Systems	599
10.4	Simple Nonholonomic Constraints	615
11	Unknown Forces/Moments–Total Momentum	639
11.1	Judicious Choice of Systems–General Motion	641
11.2	Multiple Rigid Body Impact	655
11.3	General Motion with Streams	665
12	Simulation and Design	677
12.1	Design and Simulation of a Trebuchet	678
13	Part III Summary	679
IV	Energy Methods	681
14	Energy Methods for Simple Systems	685
14.1	Work, Energy, and Power	687
14.2	Solving Work/Energy Equations	699
14.3	Energy and Constraints	719
14.4	Energy Considerations in Impacts	727
15	Energy Methods for Complex Systems	733
15.1	Energy in Rigid Body Systems	735
16	Simulation and Design	747
16.1	Complete Trebuchet Design and Simulation	748
17	Part IV Summary	749

V	Advanced Methods	751
18	Path Formulations	755
18.1	Kinetics Along The Motion Path	757
18.2	Pseudo-Coordinates and Path Formulations	767
18.3	Rigid Body Path Formulations	775
19	Energy Formulations	779
19.1	Lagrange's Equations	781
20	Simulation and Design	793
20.1	Design and Simulation	794
21	Part V Summary	795
VI	Appendix	799
A	The General Procedure	801
B	Physical Constants	803
C	Central Force Motion	805
C.1	Central Force Motion–Kepler's Laws	806
D	Rigid Body Inertia	815
D.1	Mass Moments of Inertia	816
E	Vector Based <i>Mathematica</i> Tools	823
E.1	Using <i>Mathematica</i> based vector tools	824
F	Groupwork Solutions	825
G	Problem Solutions	835
	Index	861
